SuperFrost Polysine Slides

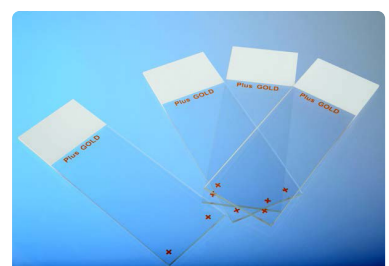

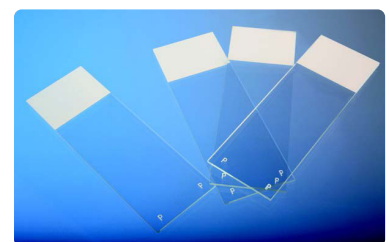

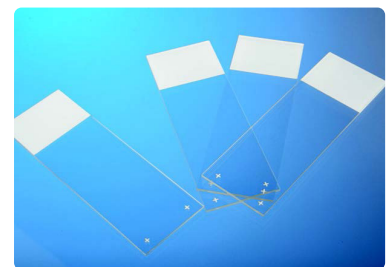

- Polysine offers adhesion that is superior to glue, protein or silane treated slides
- For tissue slices 2-5µm thick
- Electrostatically and biochemically adhesive slides
- The preparation is first adhered by electrostatic attraction and then fixed in place by biochemical binding.
- Polysine adhesion slides are best suited to paraffin-embedded tissue slices fixed in formalin, alcohol or Bouins solution

SuperFrost Plus Gold Slides

- Revolutionary glass adhesion technology that first attracts and then chemically bonds fresh or frozen tissue slices to their surface
- Particularly suited to poorly adhesive tissue samples (such as bone, breast and brain) that are larger than 5µm
- During immunohistochemical analysis of estrogen and progesterone receptors in fresh frozen breast tissue, SuperFrost Plus Gold slides assist the tissue adherence
